## **TUESDAY 9 JUNE, AFTERNOON**

TIME

1 hour 30 minutes.

### **INSTRUCTIONS TO CANDIDATES**

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided.

Do not write outside the boxed area on each page or on blank pages.

Complete in blue or black ink only. Do not write with a gel pen.

Answer all five questions.

#### **INFORMATION FOR CANDIDATES**

The total mark for this paper is 100.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

Quality of written communication will be assessed in Questions 2(c)(ii) and 3(e).

A Data Leaflet, which includes a Periodic Table of the Elements, is included in this question paper.

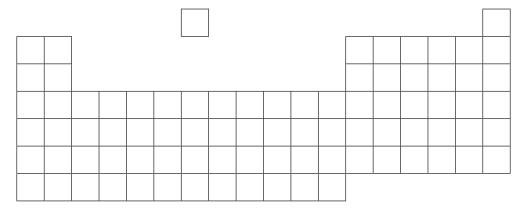

- 1 The Periodic Table has been developed over many years by several scientists. Each scientist produced a Periodic Table with different characteristics and this eventually led to the Periodic Table we use today.
  - (a) Complete the table below by adding the name of the scientist.

<b>Characteristic of the Periodic Table</b>	Name of Scientist
Law of octaves	
Spaces for undiscovered elements	

[2]

2

(b) The diagram below is an outline of the modern Periodic Table.

Using the letters **A–D** show the position of the following elements on the outline of the Periodic Table above. Place each letter in the appropriate box on the outline.

- A a gas which burns with a pop
- **B** the least reactive alkali metal
- **C** the element in Period 3 and Group 2
- **D** a metal which is a liquid at room temperature

[4]

(c) The table below shows six elements and the electronic configuration of their atoms. The elements are represented by the letters P–U (these are not symbols of the elements).

Element	Electronic configuration
Р	2,6
Q	2,8,1
R	2,8,2
S	2,8,7
Т	2,8,8
U	2,8,8,1

Using the letters **P–U**, identify the following elements. Each letter may be used once, more than once or not at all.

(i)	Two elements in the same Grou	p	_ and	
(ii)	An element in Period 2			
(iii)	A noble gas			
(iv)	An alkaline earth metal			[4]

**(d)** The halogens are found in Group 7 of the Periodic Table. All of the halogens react with sodium.

(')	write a balanced symbol equation for the reaction of social with childrine.	
	]	31
		- 1

(ii)	Sodium reacts vigorously with chlorine.	
	Name a halogen which reacts even more vigorously with sodium.	
		_ [1]

[Turn over

**(e)** The halogens chlorine, bromine and iodine, were added to solutions of different halide ions. The results are recorded in the table below.

G:

Halogen	Solution of halide ion			
lalogon	Sodium chloride	Sodium bromide	Sodium iodide	
Chlorine		orange solution produced	brown solution produced	
Bromine	no reaction		brown solution produced	
lodine	no reaction	no reaction		

(i)	Explain why there is no reaction between sodium chloride and bromine.	
		[1]
(ii)	Write a balanced symbol equation for the reaction between sodium bromiand chlorine.	de
		[3]
(iii)	State the name for the type of reaction in (e)(ii).	F41

**(f)** A sample of chlorine atoms was analysed in a mass spectrometer. The mass spectrum obtained is shown below.

Use data from the mass spectrum to calculate the relative atomic mass of chlorine. You must show your working out.

2 (a) The following balanced symbol equations show reactions of some acids:

**Reaction A** 
$$Mg + H_2SO_4 \rightarrow MgSO_4 + H_2$$

**Reaction B** 
$$CuO + 2HCI \rightarrow CuCl_2 + H_2O$$

$$\textbf{Reaction C} \qquad \text{Na$_2$CO$_3$} + \text{H$_2$SO$_4$} \rightarrow \text{Na$_2$SO$_4$} + \text{CO$_2$} + \text{H$_2$O$}$$

**Reaction D** 
$$2NH_3 + H_2SO_4 \rightarrow (NH_4)_2SO_4$$

**Reaction E** KOH + HCl 
$$\rightarrow$$
 KCl + H<sub>2</sub>O

In the following questions where a **name** is required, a chemical formula will not be accepted.

(i) Name a weak alkali from the equations above.

[1]

(ii) Name a salt of a transition metal from the equations above.

(iii) Describe a chemical test for the gas produced in **Reaction C**. Include observations for a positive test.

<del>)</del>

<del>)</del>

\_\_\_\_\_ [3]

(iv) Name the salt produced in Reaction D.

(v) Reaction E is an example of a neutralisation reaction. Write an **ionic** equation, including state symbols, for **Reaction E**.

\_\_\_\_\_ [3]

(b)		ess copper(II) carbonate is added to dilute nitric acid to form copper(II) ate solution. The reaction is exothermic.	_
	(i)	Write a balanced symbol equation for the reaction of copper(II) carbonate with nitric acid.	)
			[3]
	(ii)	What colour is the solution formed in this reaction?	
			[1]
	(iii)	Name the separation technique used to remove the excess copper(II) carbonate from the solution.	
			[1]
	(iv)	Describe how you would confirm experimentally that the reaction is exothermic.	
			[2]
